

## INTRODUCTION

To ensure Quality it is necessary to make systematic controls at every stage & also to take critical review of efforts and achievements of the company with respect to Quality of the product. Every employee's involvement is utmost important in understanding the problems, finding solutions & implementing them. All these actions would lead to maintain and improve quality and reliability of product. Poor assurance quality system results in production of products or services that are poor in quality and reliability. Hence company's standardization is now an important effective management tool for improving quality and productivity. Quality & standardization are the two essential prerequisites for a company to market its product and services in the competitive business environment. As the standards move from one level to the higher they should meet increasingly diversified and enlarged set to needs: hence the national & international standards are broader based.
